N. Ref:

**Subject: Call for expressions of interest for the evaluation of
commercial in-vitro diagnostic systems in ELISA format for use in
the diagnosis of glanders and/or melioidosis in animal.**

Dear Sir or Madam

This call for expressions of interest (AMI) is part of a process initiated by the European Reference Laboratory for equine diseases for the evaluation of commercial ELISA kits that can be used to carry out first-line analyses of glanders and/or melioidosis in animals (not restricted to equids). The kits presented must allow a simple, rapid detection of the antibodies in serum samples.

A specification of the expected performance of the glanders and/or melioidosis detection kits will be provided to applicants.

We would be grateful if you could show your interest and return your first intention proposals for this project by **15 March 2022**. Please send your response by e-mail to Karine.laroucau@anses.fr and valorisation@anses.fr.

After this date, we will consider that you are not interested in this proposal.

Yours sincerely

Karine Laroucau
